

# Under Shelf Light Attachment Assembly Instructions

## Attaching with Screws

1. Remove lens cover and bulb.
2. Punch knockouts out of Light Housing.
3. Position Light under Shelf, in desired location, and mark hole locations.
4. Drill two 1/8" (3.2mm) holes in marked locations.
5. Partially install #8 x 5/8" Sheet Metal Screws in Shelf (leaving a gap between Screw Head and Shelf so the Light can be installed)
6. Install Light Housing to Shelf by placing large round of knockout over Screw Head and sliding Light Housing (to the right with the lens facing you) to engage the smaller slot of the knockouts with the Screws.
7. Finish tightening #8 x 5/8" Sheet Metal screws (Caution: Holes can be stripped out if screws are over tightened).
8. Reinstall bulb and lens cover.

## Attaching with Magnets

1. Wipe top of Light Housing to clean off any loose dirt and dust.
  2. Peel backing off of Magnet.
  3. Attach adhesive side of Magnet to top of Light Housing in all four corners, approximately 1/2" from the right/left, and 1/2" from the front/rear.
    - a. On 18" Light (6 Magnets), position remaining Magnets in center of Light, 1/2" from front/rear of Light.
    - b. On 36" Light (8 Magnets) and 48" Light (10 Magnets), position remaining Magnets so they are equally spaced along length of Light and 1/2" from front/rear of Light.
- (See Illustration below for approximate location of Magnets on all three sizes.)
4. Position Light under Shelf (not shown) and lift Light into shelf to engage Magnets.
  5. The Light can then be slid into desired location.
